

electromagnetic induction coating thickness gauge

We are announcing that we can offer Electromagnetic Induction Coating Thickness Gauges, in response to the latest needs for the non-destructive measurement of ceramic coating of the Cermet Type Piston Rings and the determination of expected lifetime of piston ring sets as described in latest Service Letters of major engine builders.

We can offer solutions from different instrument manufacturers, at different price levels, suitable and capable to perform the thickness measurements, easy to use, with highest accuracy, versatile to measurements store and download and robust enough to withstand the harsh environment of an engine room.

Moreover, all offered instruments are offered to remarkably competitive prices and are covered by 12 months up to 24 months guarantee.

Before purchasing of such instruments for your fleet, contact us to discuss for a customized offer to your requirements and to your needs and benefit your company from our competitive prices.
